Figure S1. Staging investigations at initial diagnosis. (A) Whole-body bone scintigraphy (anterior and posterior views) showing no abnormal osseous uptake; pelvic activity represents physiological urinary bladder excretion. (B) Breast ultrasonography showing the left breast mass measuring ~2.5x2.7 and 2.4x2.8 cm in orthogonal planes. (C) Coronal chest computed tomography (lung window) showing no pulmonary or mediastinal metastasis.
