

Figure S1. Oxidative stress is unaffected by SFN treatment or *S. aureus* infection. THP-1-derived macrophages were pretreated with 10 μ M SFN for 3 h and then infected with *S. aureus*. Cells were incubated for 24 h prior to visualization of reactive oxygen species production using a CellRox assay. Confocal images are representative of n=3 independent experiments. Scale bar, 50 μ m. SFN, sulforaphane; *S. aureus*, *Staphylococcus aureus*; DMSO, dimethyl sulfoxide.
