

Figure S1. Flow cytometry analysis of tumour infiltrating CD45⁺ cells in patients with non-small cell lung cancer. Lymphocytes and monocytes in single cells were gated. Most tumour infiltrating CD45⁺ cells were HLA-DR positive. Many CD11c⁺ cells were CD163 positive and CD20 negative. The CD11c⁺ subset contained cells positive and negative for CD14 and CD86. Sq; squamous cell carcinoma, Ad; adenocarcinoma.
