

Figure S1. CREB expression in LUSC and SCLC tissues. (A and B) CREB expression in (A) LUSC, (B) SCLC and their adjacent normal tissues was measured by ELISA, as presented by scatter plot. Data were analyzed by a paired Student's t-test. CREB, cAMP response element-binding protein; LUSC, lung squamous cell carcinoma; SCLC, small-cell lung cancer.

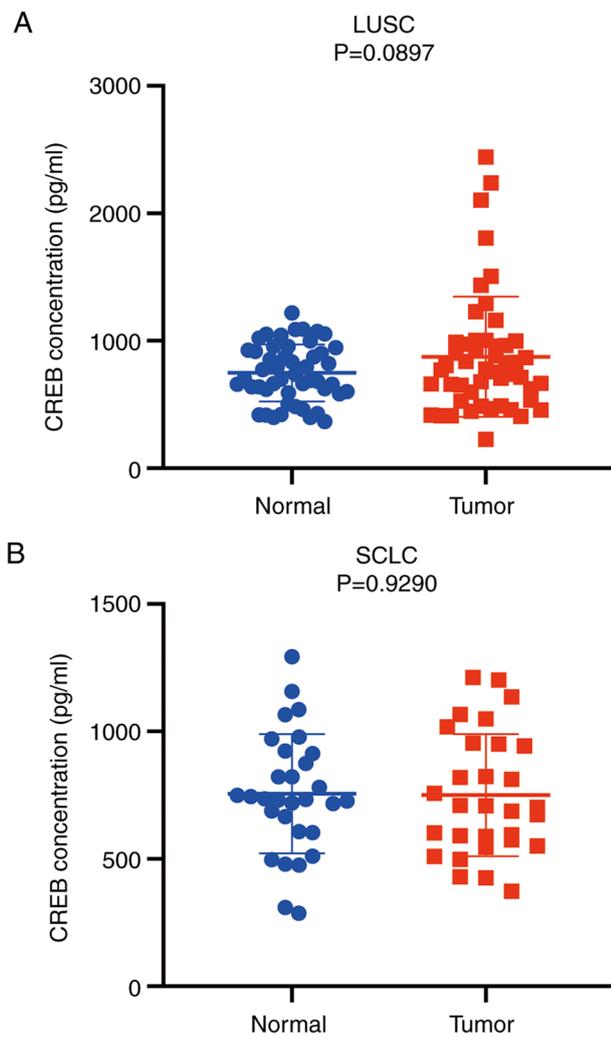

Figure S2. Knockdown efficiency of the EP300-sh1 and -sh2 plasmids. Knockdown efficiency of the EP300-sh1 and -sh2 plasmids compared with their negative empty vector control as measured by immunoblotting in A549 and H1299 cell lines. Representative images from three biological replicates are presented. EP300, E1A binding protein P300; sh, short hairpin
