

Figure S1. CSE overexpression in HPAECs. HPAECs were transfected with a vector or CSE plasmid as described in the materials and methods. Expression level of CSE was examined using western blotting. The data are presented as the mean \pm standard error of the mean of at least three independent experiments. * $P < 0.05$ vs. the control or HPAECs transfected with vector. HPAECs, human pulmonary artery endothelial cells; CSE, cystathionine γ -lyase.
