EXPRESSION OF CONCERN

DOI: 10.3892/ol.2026.15946

Geldanamycin induces apoptosis in human gastric carcinomas by affecting multiple oncogenic kinases that have synergic effects with TNF-related apoptosis-inducing ligand

HUI CHEN, LIANG-QING LI and DUN PAN

Oncol Lett 10: 3732-3736, 2015; DOI: 10.3892/ol.2015.3807

Following the publication of the above paper, it was drawn to the Editor's attention by a concerned reader that, regarding the results of the cell invasion assay experiments shown in Fig. 1 on p. 3734, the images in Fig. 4C for the 'Control' and '0.4 μM GA' data panels were apparently matching, suggesting that this figure had been assembled incorrectly.

The authors have been contacted by the Editorial Office to offer an explanation for the apparent error made in assembling the data in Fig. 1, and we are awaiting their response. Owing to the fact that the Editorial Office has been made aware of potential issues surrounding the scientific integrity of this paper, we are issuing an Expression of Concern to notify readers of this potential problem while the Editorial Office continues to investigate this matter further.
