Table SI. Associations between FHL1 expression and clinical characteristics in patients with glioma. The FHL1 positive rate was significantly correlated with WHO classification of glioma grades.

Pathological characteristics	n	FHL expression Positive	FHL expression Negative	P-value
Age at diagnosis, y				0.834
≥60	34	15	19	
<60	80	37	43	
KPS at diagnosis				0.052
≥70	63	30	33	
<70	51	19	32	
Sex				0.561
Male	58	28	30	
Female	56	24	32	
WHO pathological grade				<0.001
I	16	14	2	
II	40	27	13	
III	24	7	17	
IV	34	4	30	
Extent of resection				0.160
Total resection	62	32	30	
Partial resection	52	20	32	

FHL1, four-and-a-half LIM domains 1; KPS, Karnofsky performance status; WHO, World Health Organization.
