

Figure S1. Viability of HUVECs as measured by MTT assay. HUVECs were treated with PMA, PMA + OKC, PMA + OKC + NA or PMA + IL4/13. Cell viability was determined after 48 h treatment. PMA only was used as the control group. **P<0.01, ***P<0.001. PMA, phorbol-12-myristate-13-acetate; OKC, odontogenic keratocyst; NA, niflumic acid; IL, interleukin.
