

Table SI. Five-year DFS and OS rates according to different variables in patients with resectable breast cancer.

Variable	5-year DFS (%)	P-value	5-year OS (%)	P-value
NLR		<0.001		<0.001
Low	96.9		99.1	
High	78.7		83.1	
Fibrinogen		<0.001		<0.001
Low	91.5		94.1	
High	80.6		86.0	
F-NLR score		<0.001		<0.001
0	95.7		97.8	
1	87.5		90.9	
2	74.0		79.9	

Kaplan-Meier method was used to calculate the 5-year DFS and OS rates in each group, and the log-rank test was used to compare rates between or among the groups. NLR, neutrophil-to-lymphocyte ratio; F-NLR, combination of fibrinogen concentration and NLR; DFS, disease-free survival; OS, overall survival.
