

Figure S1. Expression levels of the MCM7 host gene and miRs in the miR-106b-25 cluster present in ESCC tissues. (A) MCM7 expression increased in ESCC tissues compared with normal tissues. (B-D) No significant change in the tissue expression of any miRs in the miR-25-93 cluster was present in the intron of MCM7 was observed. MCM7, minichromosome maintenance complex component 7; miRs, microRNA; ESCC, esophageal squamous cell carcinoma.
