

Figure S1. Cell proliferation in (A) T47D breast cancer cells, (B) MCF-7 breast cancer cells and (C) MCF-10A breast epithelial cells after treatment with BHB, β -hydroxybutyrate. Line graphs indicate means of two independent experiments with standard deviation. *Indicate significant difference from the control (0 mM BHB). Significant levels: *P<0.05; **P<0.01; ***P<0.001.

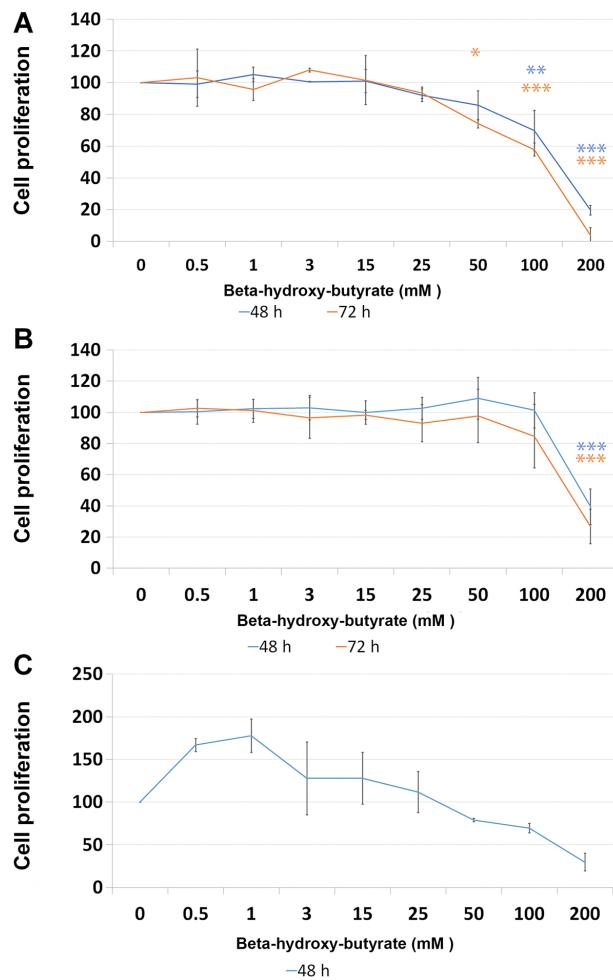

Table SI. Expression of enzymes responsible for ketone body catabolism in MCF-7 and T47D breast cancer cells.
