

Figure S1. Detection of transfection efficiency. Following CLC-7 siRNAs or NCsi transfection, expression of CLC-7 was measured using (A) western blotting and (B) the results were semi-quantified. **P<0.01 vs. NCsi group. n=5. CLC-7, H(+)/Cl(-) exchange transporter 7; siRNA, small interfering RNA; NCsi, negative control siRNA; ns, not significant.
