

Figure S1. The increased multiple of IL-1 β , IL-6, TNF- α stimulated by LPS between GFs from AgP and GFs from healthy subjects. (A) There is a significant difference in the increased multiple of IL-1 β stimulated by LPS between GFs from AgP and GFs from healthy subjects (*P<0.05). (B) There is a significant difference in the increased multiple of IL-6 stimulated by LPS between GFs from AgP and GFs from healthy subjects (*P<0.05). (C) There is a significant difference in the increased multiple of TNF- α stimulated by LPS between GFs from AgP and GFs from healthy subjects (*P<0.05). IL, interleukin; LPS, lipopolysaccharide; GFs, gingival fibroblasts; AgP, aggressive periodontitis; TNF- α , tumor necrosis factor- α ; HGFs, GFs from healthy subjects; AGFs, GFs from patients with aggressive periodontitis.
