

Figure S1. 1,25(OH)₂D₃ could not induce apoptosis. Cells were treated with 10 nM of 1,25(OH)₂D₃. Morphologic assessment of apoptosis detected by Hoechst 33342 under fluorescence microscopy. Original magnification, x1,000 (scale bar=10 μm). Three independent experiments were undertaken. 1,25(OH)₂D₃, 1,25-dihydroxyvitamin D₃.
