

Figure S1. Full western blot images of RHBDD2 and WWOX co-IP assays. (A) Unspecific bands were observed at higher and lower molecular weights in the IP assays not corresponding with RHBDD2 and WWOX proteins; (B and C) these bands were not detected in subsequent blots. RHBDD2, rhomboid domain containing 2; WWOX, WW domain-containing oxidoreductase; IP, immunoprecipitation; PRL, prolactin; Prol., proliferative; Diff., differentiated; Ab, antibody; Ctrl, control; CF, cytoplasmic fraction; MF, membrane fraction.

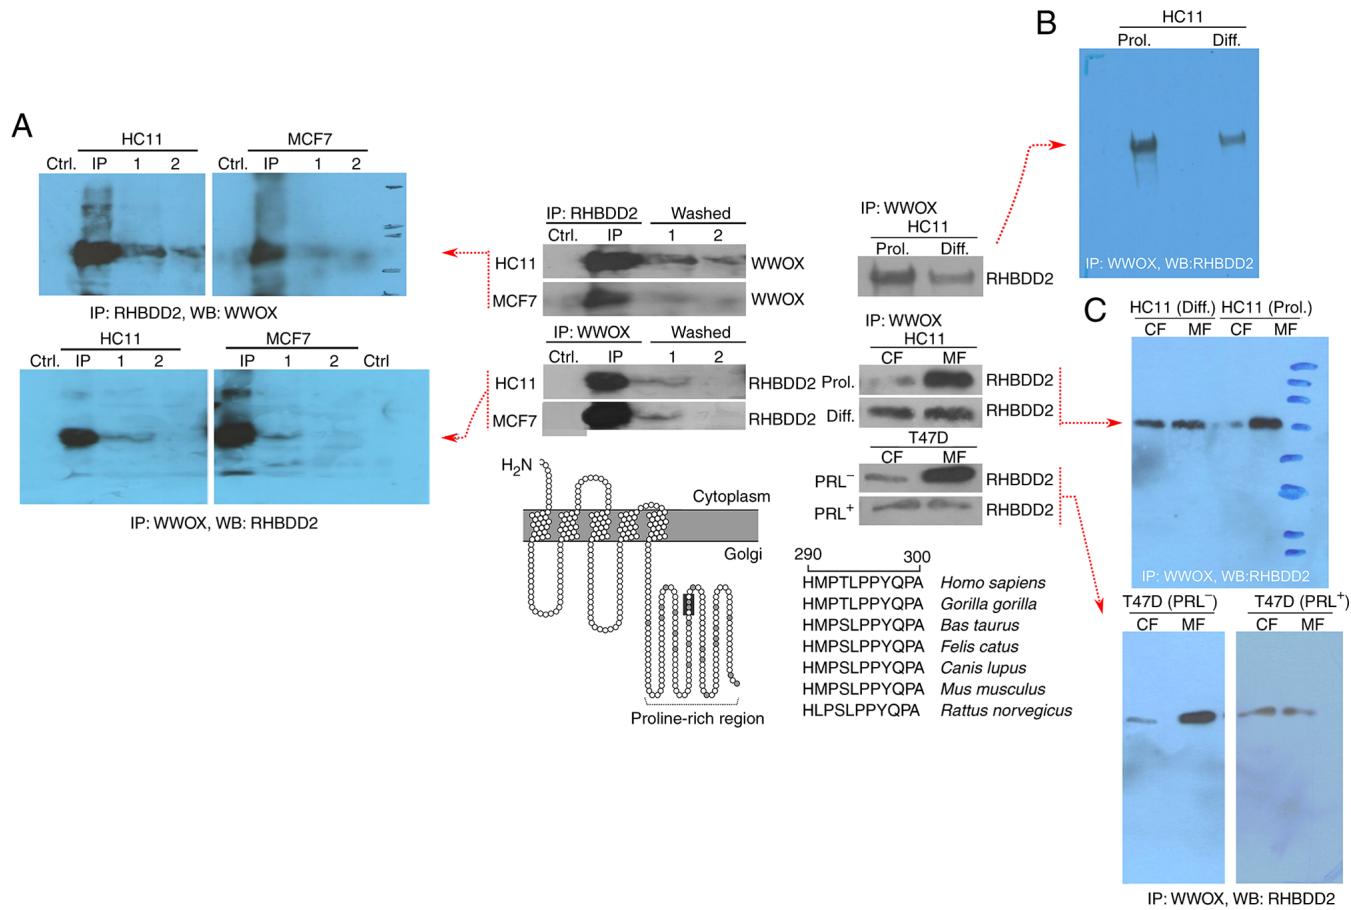

Table SI. Primers used for reverse transcription-quantitative PCR analysis.
