Figure S1. Appearance of cakes in 12-well plates after freeze-drying siRNA lipoplexes in solutions containing various concentrations of amino acids. siRNA lipoplexes with 50 pmol siRNA were diluted in 125 µl 10, 25, 50, 100 or 150 mM amino acid solutions and then transferred to 12-well plates, followed by freeze-drying. siRNA, small interfering RNA; lipoplex, liposome complex.
