

Figure S1. Relative GAPDH expression was detected by (A) reverse transcription quantitative PCR and (B) western blotting. ns, non-significant; si, short interfering; NC, negative control.

Figure S2. (A) RT-qPCR detected the expression level of miR-331-3p in HTR-8/Svneo cells transfected with miR-331-3p mimics. ** $P < 0.01$ vs. mimics-NC. (B) RT-qPCR detected the expression level of miR-331-3p in HTR-8/Svneo cells transfected with miR-331-3p inhibitor. ** $P < 0.01$ vs. inhibitor-NC. (C) RT-qPCR detected the expression level of TGF- β 1 in HTR-8/Svneo cells transfected with si-TGF- β 1. ** $P < 0.01$ vs. si-NC. RT-qPCR, reverse transcription quantitative PCR; miR, microRNA; si, short interfering; NC, negative control.
