Pearson chi-square test was used to examine the protein expressions' possible association with the pathological and clinical outcomes of the case under study. ^aP-value are from continuous correction algorithm. ^bP-value are from Fisher's exact test. ^cP<0.05 statistically was considered significant. Ethnic minority include Zhuang and MuLao. Underlying diseases mainly include diabetes hypertension, heart disease. Recurrent cases were collected until October 2020.

Table SII. Correlation between the clinicopathological features and the mRNA expressions of TLR4 and MyD88.

The t-test was used to examine the possible association between mRNA expressions and the pathological and clinical results of the cases being studied. ^aP-value are from single factor analysis of variance. Bonferroni correction: multiple comparison: MyD88: (Tumor site: A VS. B, P=1.000; A VS. C, P=1.000; A VS. D, P=1.000; A VS. E, P=1.000; B VS. C, P=1.000; B VS. D, P=1.000; B VS. E, P=1.000; C VS. D, P=1.000; C VS. E, P=1.000; D VS. E, P=1.000) (tumor growth time: A VS. B, P=1.000; A VS. C, P=1.000; B VS. C, P=1.000). TLR4: (Tumor site: A VS. B, P=1.000; A VS. C, P=1.000; A VS. D, P=1.000; A VS. E, P=1.000; B VS. C, P=1.000; B VS. D, P=1.000; B VS. E, P=1.000; C VS. D, P=1.000; C VS. E, P=1.000; D VS. E, P=1.000) (tumor growth time: A VS. B, P=1.000; A VS. C, P=0.001; B VS. C, P=0.281). ^bP<0.05 was considered to indicate a statistically significant difference. Ethnic minority mainly include Zhuang and MuLao. Underlying diseases mainly include diabetes hypertension, heart disease. Recurrent cases were collected until October 2020.
