

Figure S1. RepSox inhibits cell proliferation and colony formation and induces S-phase arrest. (A-D) Relative expression of cycle-related genes after treatment with different concentrations of RepSox in HOS and 143B cell lines. CDK, cyclin-dependent kinases; ns, no significance. * $P<0.05$, ** $P<0.01$ and *** $P<0.001$ vs. the control.
