

Figure S1. Egfl7 protein expression levels in tumors grown in mice. Total protein was extracted from 4T1-Ctrl, 4T1-Egfl7 and 4T1- Δ EGF tumors (n=5 per condition from the initial 7 tumors/group) and analyzed via western blotting for the HA-tag and actin. Expression levels were measured using a Fujifilm Las3000 gel reader. Egfl7, epidermal growth factor-like domain 7; Ctrl, control; HA, hemagglutinin.
