

Figure S1. Sensitivity analysis of SAS and SAS-VCR cells to 5-FU and cisplatin. (A) Cells were treated with the indicated concentrations of 5-FU for 48 h (n=3). (B) Cells were exposed to the indicated concentrations of cisplatin for 24 h (n=5). Cell viability was examined by an MTT assay. Data are presented as the mean \pm SEM. *P<0.05 vs. SAS cells. VCR, vincristine; 5-FU, 5-fluorouracil.
