

Figure S1. Rhod 2 staining of intracellular calcium depletion. Confocal microscopy bright field and fluorescent images x20 magnification of one UMM (OMM2.3) and one CMM (A375) line after staining with 1 μ M Rhod 2 and 48 h of treatment with 0, 1, 3 and 8 μ M amlodipine. UMM, uveal malignant melanoma; CMM, cutaneous malignant melanoma.

Figure S2. Spheroid colonies. Light microscopy x5 magnification images of 3D spheroid colonies in CMM and UMM lines. Images were acquired just prior to the addition of 20 μ M amlodipine in the treated groups or an equivalent volume of DMSO in control groups (Day 0). The same colonies were then visualized again after 48 h of treatment (Day 2). UMM, uveal malignant melanoma; CMM, cutaneous malignant melanoma.

Figure S3. Senescence assay for amlodipine-induced cell death. Light microscopy x20 magnification images of CMM (A375, CHL-1 and IPC298) and UMM (MP41) lines when treated with amlodipine at 3 dose points over a 48-h period. Senescence is indicated with blue dye. UMM, uveal malignant melanoma; CMM, cutaneous malignant melanoma.

Table SI. High-throughput drug screening compounds: Ranked list of the 1,018 screened compounds based on observed proliferation ratio.

Rank	Proliferation ratio	Compound
1	0.00000	Fluoxetine HCl
2	0.00042	Amlodipine (Norvasc)
3	0.00042	Dronedarone HCl (Multaq)
4	0.00049	Prochlorperazine dimaleate
5	0.00055	Afatinib (BIBW2992)
7	0.00055	AMG-073 HCl (cinacalcet hydrochloride)
8	0.00055	Amlodipine besylate (Norvasc)
6	0.00055	Crizotinib (PF-02341066)
