

Figure S1. Correlation of combined OPRPN^{high} and SMR3A^{high} expression with DSS and PFS. Kaplan-Meier plots show differences in DSS and PFS between the subgroup with co-expression of OPRPN^{high} and SMR3A^{high} (dotted line) and all others (solid line). DSS, disease-specific survival; PFS, progression-free survival; SMR3A, submaxillary gland androgen-regulated protein 3A.
