

Figure S1. Changes in body weight of mice during PZH treatment. Statistical analysis of all mouse body weight between CCl₄-induced (control) and PZH-treated groups during 8 weeks of the experiment. Data are presented as the median \pm SD. CCl₄, carbon tetrachloride; PZH, Pien Tze Huang.

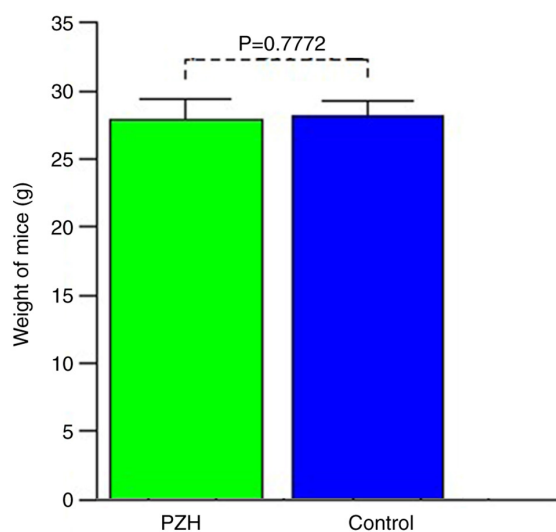

Figure S2. GO enrichment analysis for differentially expressed circular RNA-related target genes. (A) Top five GO terms in the cellular component category. (B) Top five GO terms in the molecular function category. $P < 0.05$ was considered to indicate a statistically significant difference. AP-1, activator protein 1; GO, Gene Ontology.
