

Figure S1. Kaplan-Meier survival curves for IVRF in patients with UTUC according to preoperative NLR. IVRF, intravesical recurrence-free survival; UTUC, upper tract urothelial carcinoma; NLR, neutrophil-to-lymphocyte ratio; RNU, radical nephroureterectomy.

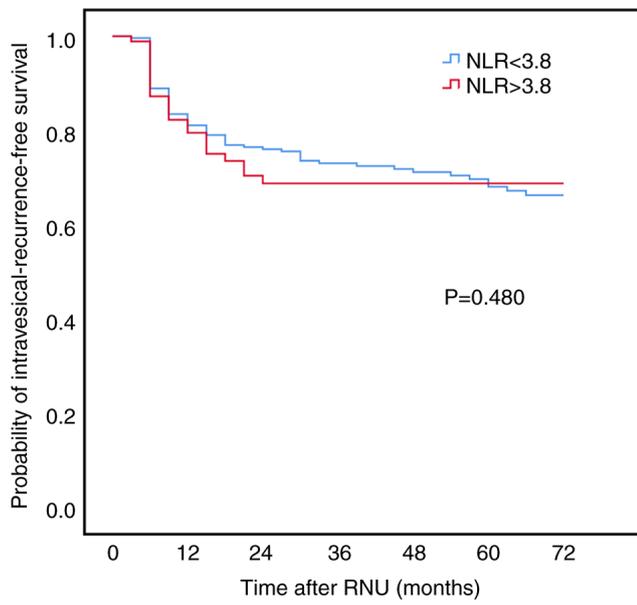

Figure S2. Kaplan-Meier survival curves for IVRF in patients with UTUC according to preoperative eGFR. IVRF, intravesical recurrence-free survival; UTUC, upper tract urothelial carcinoma; eGFR, estimated glomerular filtration rate; RNU, radical nephroureterectomy.

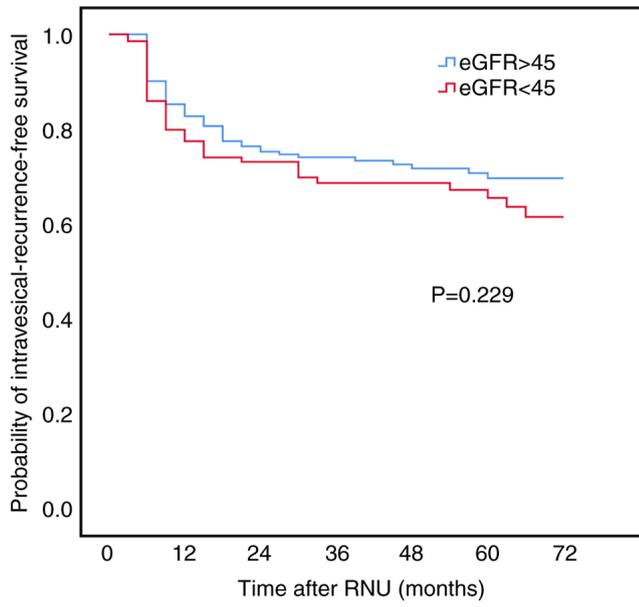

Figure S3. Nomogram to predict the two- and five-year IVRF in patients with UTUC after RNU. IVRF, intravesical recurrence-free survival; UTUC, upper tract urothelial carcinoma; RNU, radical nephroureterectomy; NLR, neutrophil-to-lymphocyte ratio.
