

Figure S1. The flow cytometric plots. (A and B) BDMC decreased the cell viability of U-2 OS cells. Cells (8×10^4 cells/well) were incubated with BDMC (0, 2.5, 5, 7.5, 10, 15, 20 and $40 \mu\text{M}$) for (A) 24 and (B) 48 h. Cells were harvested and stained with the propidium iodide solution and then the total cell viability was assessed using flow cytometric analysis. BDMC, bisdemethoxycurcumin.
