

Figure S1. The transfection efficiency was detected by qPCR. (A) A549 cells were transfected with vectors containing Mia40 overexpression plasmid as indicated. The transfection efficiency was detected by qPCR. *** $P < 0.001$, vs. the vector group. (B) A549 cells were transfected with small interfering RNA (si-Parkin or si-NC) and the transfection efficiency was assessed by qPCR. ** $P < 0.01$, vs. the NC group.
