

Table SI. Differences in expression of IFN- γ in patients with diffuse large B-cell lymphoma with different C-reactive protein levels.

Targets	0 vs. 2	0 vs. 3	1 vs. 2	1 vs. 3	2 vs. 3
IFN- γ	P=0.765	P=0.017	P=1.000	P=0.404	P=0.850

Group 0, CRP 0-10 mg/l; group 1, CRP 10-50 mg/l; group 2, CRP 50-100 mg/l; and group 3, CRP >100 mg/l. IFN- γ , interferon- γ .

Table SII. Variability of cytokines among patients with diffuse large B-cell lymphoma with different IPI scores.

Targets	2 vs. 3	2 vs. 4	2 vs. 5
IL-6	P=0.167	P=0.035	P=0.766
IL-10	P=0.017	P=0.003	P=0.088

The grouping numbers 2, 3, 4 and 5 represent the IPI score. IL, interleukin; IPI, International Prognostic Index.
