Figure S1. Effect of vorinostat on Luc activity in HeLa and HepG2 cells following transfection of cationic liposome (empty vector). HeLa (A) and HepG2 cells (B) were transfected with only cationic liposomes in the presence or absence of 1 or 10 µM vorinostat and then incubated for 24 h. Each value represents the mean ± SD (n=3). FLuc, firefly luciferase.
Figure S2. Effect of vorinostat on EGFP expression in HeLa and HepG2 cells following transfection of cationic liposomes (empty vector). HeLa and HepG2 cells were transfected with only cationic liposomes in the presence or absence of 1 or 10 µM vorinostat and then incubated for 24 h. EGFP expression in the cells was observed using a fluorescence microscope. Scale bar, 100 µm. EGFP, enhanced green fluorescent protein.
