

Table SI. Pathological characteristics of patients who experienced local failure.

Pathological characteristics	ELF, n=13	LLF, n=7	P-value ^a
Adenocarcinoma, n (%)	3 (23)	2 (29)	>0.99
Squamous cell carcinoma, n (%)	5 (38)	1 (14)	0.35
Other/unspecified non-small cell cancer, n (%)	1 (8)	0 (0)	>0.99
unproven, n (%)	4 (31)	4 (57)	0.36

^aDifferences in the incidence of local failures were assessed using Fisher's exact test. ELF, early local failure (local failure \leq 2 years from SBRT); LLF, late local failure (local failure >2 years after SBRT; SBRT, stereotactic body radiotherapy).
