

Figure S1. Association between KEAP1, NRF2 and HO-1 expression and the prognosis of patients with lung adenocarcinoma. Kaplan-Meier survival curves of (A) disease-specific survival, (B) progression-free interval and (C) disease-free interval for KEAP1 expression; (D) disease-specific survival, (E) progression-free interval and (F) disease-free interval for NRF2 expression; and (G) disease-specific survival, (H) progression-free interval and (I) disease-free interval for HO-1 expression. KEAP1, Kelch-like ECH associated protein 1; NRF2, nuclear factor erythroid 2-related factor 2; HO-1, heme oxygenase 1; L, low-risk; H, high-risk; HR, hazard ratio; CI, confidence interval.
