

Figure S1. Mortality rates of mice treated with various concentrations of H_2O_2 . When the concentration of $H_2O_2 \geq 1.0\%$, the mortality rate of the mice increased. In the 0.3, 0.6, 1.0, 1.5 and 3.0% H_2O_2 groups there were 10, 10, five, four and four mice, respectively. The number of dead mice in the 0.3, 0.6, 1.0, 1.5 and 3.0% H_2O_2 groups were zero, zero, one, two and four mice, respectively.
