

Table SI. Impact of age on OS and PFS in acute myeloid leukemia: Cox proportional hazards regression analysis.

A, OS		
Variable	HR (95% CI)	P-value
Age	1.04 (1.01-1.08)	<0.05

B, PFS		
Variable	HR (95% CI)	P-value
Age	1.02 (0.99-1.05)	0.28

HR, hazard ratio; CI, confidence interval; OS, overall survival; PFS, progression-free survival.
