

Figure S1. Cell viability assays comparing the effects of rupatadine with those of irinotecan, 5-FU and paclitaxel on MIA-PACA cells over 24 and 48 h. The bar graphs depict the percentage of cell viability at varying concentrations: Irinotecan (3.125-200 ng/ml), 5-FU (1-100 μ M) and paclitaxel (1-10 nM). *P<0.05 vs. the control after 24 h; +P<0.05 vs. the control after 48 h. 5-FU, 5-fluorouracil.
