

Figure S1. Interaction effects between EBV DNA status, age, and disease stage on survival outcomes in patients with NKTCL. (A) Interaction between EBV DNA status and age on OS. (B) Interaction between EBV DNA status and age on PFS. (C) Interaction between disease stage and age on OS. (D) Interaction between disease stage and age on PFS. NKTCL, natural killer/T-cell lymphoma; OS, overall survival; PFS, progression-free survival; EBV, Epstein-Barr virus; LDH, lactate dehydrogenase.
