Figure S1. Upper abdominal magnetic resonance imaging. (A) The lesion (indicated by arrow) shows as a mildly hyperintense signal on T1WI. (B) The lesion (indicated by arrow) shows mild hyperintensity on T2WI (tumour diameter, 31.17 mm). (C) The lesion (indicated by arrow) shows mild hyperintensity on diffusion-weighted imaging. (D) The lesion (indicated by arrow) exhibits high signal intensity on apparent diffusion coefficient mapping. T1WI, T1-weighted imaging.
