

Figure S1. Effect of LPS treatment on the NF- κ B pathway and BV-2 cell viability. (A) Western blotting protein bands for p-NF- κ B, NF- κ B, and GAPDH. (B) Western blotting detection of p-NF- κ B/NF- κ B levels in BV-2 cells treated with LPS. (C) Viability of BV-2 cells following treatment with LPS. $^{**}P < 0.01$. p-, phosphorylated; LPS, lipopolysaccharide; ns, not significant.
