

Figure S1. Western blot analysis of LC3B, mTOR protein from different treatment group. (A) Immunoblotting results of mTOR, LC3B expression at 1 day post-SE. (B) Western blot analysis of mTOR, LC3B expression at 1 day post-SE. Data are presented as mean \pm SD. * $P < 0.05$ (vs. the previous group, $n = 6$ rats per group). mTOR, mammalian target of rapamycin, SE, status epilepticus.
