

Figure S2. Cell-cell communication patterns associated with cisplatin resistance. (A) Bubble plot illustrating the cell-cell interaction strength between the high-cisplatin-resistant epithelial group and other cell types. (B) Bubble plot illustrating the cell-cell interaction strength between the low-cisplatin-resistant epithelial group and other cell types.

Figure S3. Cell-cell communication patterns associated with CCT2 expression. (A) Bubble plot showing intercellular communication between CCT2-high epithelial cells and other cell types. (B) Bubble plot showing intercellular communication between CCT2-low epithelial cells and other cell types. CCT, chaperonin-containing TCP-1.
