Figure S1. Pelvic magnetic resonance imaging findings. (A) Axial T2-weighted image reveals a heterogeneous cystic mass in the right pelvic cavity (corresponding to the clinical finding of a right pelvic mass). (B) Axial T2-weighted image demonstrates a hypoplastic uterus with small volume. (C) Axial view at the level of the perineum showing external genital anatomy. These imaging features, consistent with the patient's history of secondary amenorrhea and infertility, support the diagnosis of reproductive system anomalies associated with Bardet-Biedl syndrome.
